LM19264FCC
LCD Module User Manual

Shenzhen TOPWAY Technology Co., Ltd.

Rev.	Descriptions	Release Date
0.1	Preliminary New release	2004-11-16

Table of Content

1. Basic Specifications

1.1 Display Specifications

1) LCD Display Mode	: FSTN, Positive, Transflective
2) Display Color	: Display Data = "1" : Black (*1)
	: Display Data = "0" : Gray (*2)
3) Viewing Angle	: 12 H
4) Driving Method	: 1/64 duty, 1/ 9bias
5) Back Light	: White LED backlight

Note:
*1. Color tone may slightly change by Temperature and Driving Condition.
*2. The Color is defined as the inactive / background color

1.2 Mechanical Specifications

1) Outline Dimension   : 108.0 x 55.0 x 12.5MAX
                           (see attached Outline Drawing for details)

1.3 Block Diagram

1.4   Terminal Functions

Pin No.	Pin Name	I/O	Descriptions
1	DB7	I/O	Data bus;
:	:	:	Three state I/O terminal for display data or instruction data
8	DB0	I/O	
9	E	Input	In read mode
10	R/W	Input	R/W = H; Data read form the LCD module, data appears at DB0 – DB7 and can be read by the host while, E = H and the device is being selected In write mode R/W = L; Data write to the LCD module, data appears at DB0 – DB7 will be written into the LCD module at E = H→L and device is being selected
11	RS	Input	RS = H; DB0 – DB7 = Display RAM data RS = L; DB0 – DB7 = Instruction data
12	V0	Power	LCD Contrast reference
13	VDD	Power	Positive Power Supply
14	VSS	Power	Negative Power Supply, Ground (0V)
15	CSB	Input	Chip selection, enable access to each section of the LCD module
16	CSA	Input	

CSA	CSB	Function
0	0	Enable access to the Left Side (64 column) of the LCD module
0	1	Enable access to the Middle Section (64 column) of the LCD module
1	0	Enable access to the Right Side (64 column) of the LCD module
1	1	Disable all the access to LCD module

Pin No.	Pin Name	I/O	Descriptions
17	NC	-	No Connection
18	/RST	Input	Reset signal /RST = L, Display off display start line register becomes 0 no command or instruction data could be accepted /RST = H, Normal running
19	BLA	Power	Positive Power for LED backlight
20	BLK	Power	Negative Power for LED backlight

2. Absolute Maximum Ratings

Items	Symbol	Min.	Max.	Unit	Condition
Supply Voltage	V_{DD}	0	7.0	V	V_{SS} = 0V
Operating Temperature	T_{OP}	-20	70	°C	No Condensation
Storage Temperature	T_{ST}	-30	80	°C	No Condensation

Cautions:
Any Stresses exceeding the Absolute Maximum Ratings may cause substantial damage to the device. Functional operation of this device at other conditions beyond those listed in the specification is not implied and prolonged exposure to extreme conditions may affect device reliability.

3. Electrical Characteristics

3.1 DC Characteristics

V_{SS}=0V, V_{DD} =5V, T_{OP} =25°C

Items	Symbol	MIN.	TYP.	MAX.	Unit	Applicable Pin
Operating Voltage	V_{DD}	4.8	5.0	5.2	V	VDD
Input High Voltage	V_{IH}	3.5	-	V_{DD}	V	RS, R/W, E, CSA, CSB,
Input Low Voltage	V_{IL}	0	-	0.4	V	DB0-DB7
Operating Current	I_{DD}	-	4.5	12	mA	VDD, VSS

3.2 LED Backlight Circuit Characteristics

BLK=0V, If_{BLA}=80mA, T_{OP} =25°C

Items	Symbol	MIN.	TYP.	MAX.	Unit	Applicable Pin
Forward Voltage	Vf_{BLA}	-	5.0	-	V	BLA
Forward Current	If_{BLA}	-	-	100	mA	BLA

Cautions:
Exceeding the recommended driving current could cause substantial damage to the backlight and shorten its lifetime.

BLA

BLK

No. of LED = 4pcs

      www.topwaysz.com
Document Name: LM19264FCC-Manual-Rev0.1.doc
3.3　AC Characteristics

V_{SS}=0V, V_{DD} =5V, T_{OP} =25°C

| Item	Symbol	MIN.	TYP.	MAX.	Unit
E cycle time	tc	1500	-	-	ns
E high level width	twh	700	-	-	ns
E low level width	twl	700	-	-	ns
E rise time	tr	-	-	18	ns
E fall time	tf	-	-	18	ns
Address set-up time	tasu	210	-	-	ns
Address hold time	tah	15	-	-	ns
Data set-up time	tdsu	300	-	-	ns
Data delay time	td	-	-	480	ns
Data hold time (write)	tdhw	15	-	-	ns
Data hold time (read)	tdhr	30	-	-	ns

Host Write Timing Diagram

Host Read Timing Diagram
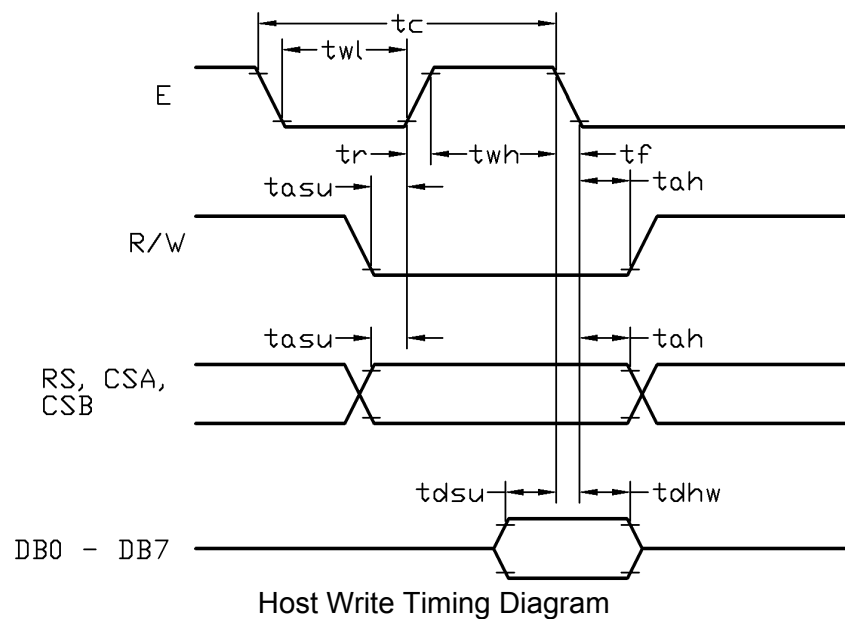

4. Function Specifications

4.1 Basic Setting

To drive the LCD module correctly and provide normally display, please use the following setting

> Display start line (Z address)= 0
> LCD Display = on
>
> Note:
> These setting/commands should issue to both controllers while start up.
> See the Display Control Instructions section for details.

www.DataSheet4U.com

4.2 Adjusting the LCD display contrast

A Variable-Resistor must be connected to the LCD module for providing a reference to V0. Adjusting the VR will result the change of LCD display contrast. The recommended value of VR is 25k to 50k.

LCD Module
VDD

V0

VOUT

4.3 Resetting the LCD module

The LCD module should be initialized by setting /RST terminal at low level when turning the power on.

When /RST pull low, the LCD module will:
- Display off
- Display start line register becomes 0. (Z-address=0)

While /RST is low, no instruction can be accepted except status read. Therefore, execute other instructions after making sure that DB4=0 (clear /RST) and DB7=0 (ready) by status read instruction. The conditions of power supply at initial power up are as follow:

Item	Symbol	MIN.	TYP.	MAX.	Unit
Reset time	trs	2.0	-	-	us
Rise time	tr	-	-	150	ns

VDD

trs

tr

/RST

4.4 Display Memory Map

Page (X) adddress	data	LCD Display (front view)		
0	D0 : D7			
1	D0 : D7			
2	D0 : D7			
3	D0 : D7		192x64 pixels	
4	D0 : D7			
5	D0 : D7			
6	D0 : D7			
7	D0 : D7			
Column(Y) Address		00h → 3Fh	00h → 3Fh	00h → 3Fh
Chip Select		CSA=0, CSB=0	CSA=0, CSB=1	CSA=1, CSB=0

Note:
1) Display star line (Z address) = 0
2) The Display Data store separately in three drivers.

4.5 Internal Registers

There are three registers in each section of LCD module. Each of them could be controlled independently.

Page (X) Address Register
X address register designates pages of the internal display data RAM. Count function is not available. The address should set by instruction.

Column (Y) Address Counter
Y address counter designates address of the internal display data RAM. It could be set by instruction and is increased by 1 automatically by read or write display data operations.

Display Start Line (Z) Register
Z address register indicates of display data RAM to LCD top line. It may be used for scrolling the display pattern on the LCD.

4.6 Display Control Instructions

Instructions	RS	R/W	DB7	DB6	DB5	DB4	DB3	DB2	DB1	DB0	Function	Note
Display on/off	0	0	0	0	1	1	1	1	1	1/0	Controls the display on or off. Internal status and display data in RAM is not affected 0=off, 1=on	
Set Column (Y) Address	0	0	0	1	Y address (0-63)						Set the Column address into the Y address counter	
Set Page (X) Address	0	0	1	0	1	1	1	X address (0-7)			Set the Page address into the X address register	
Set Display Start Line (Z address)	0	0	1	1	Z address (0-63)						Indicates the display data RAM displayed at the top of the screen	
Status Read	0	1	Busy	0	on/off	Reset	0	0	0	0	Read status Busy=L, Driver ready; Busy=H, Driver busy on/off=L, Display is on; on/off=H, Display is off Reset=L, Normal Running; Reset=H, reset	*1
Write Display Data	1	0	Write data								Write display data into display data RAM, After writing instruction, Y address counter increased by 1 automatically	
Read Display Data	1	1	Read data								Read display data form the display data RAM	*1

Note:
*1. For the details of the Display Control Instructions, please refer to Samsung S6B0108 handbook.

5. Design and Handling Precaution

1.   The LCD panel is made by glass. Any mechanical shock (eg. dropping form high place) will damage the LCD module.
2.   Do not add excessive force on the surface of the display, which may cause the Display color change abnormally.
3.   The polarizer on the LCD is easily get scratched. If possible, do not remove the LCD protective film until the last step of installation.
4.   Never attempt to disassemble or rework the LCD module.
5.   Only Clean the LCD with Isopropyl Alcohol or Ethyl Alcohol. Other solvents (eg. water) may damage the LCD.
6.   When mounting the LCD module, make sure that it is free form twisting, warping and distortion.
7.   Ensure to provide enough space (with cushion) between case and LCD panel to prevent external force adding on it, or it may cause damage to the LCD or degrade the display result.
8.   Only hold the LCD module by its side. Never hold LCD module by add force on the heat seal or TAB.
9.   Never add force to component of the LCD module. It may cause invisible damage or degrade of the reliability.
10.   LCD module could be easily damaged by static electricity. Be careful to maintain an optimum anti-static work environment to protect the LCD module.
11.   When peeling off the protective film from LCD, static charge may cause abnormal display pattern. It is normal and will resume to normal in a short while.
12.   Take care and prevent get hurt by the LCD panel sharp edge.
13.   Never operate the LCD module exceed the absolute maximum ratings.
14.   Keep the signal line as short as possible to prevent noisy signal applying to LCD module.
15.   Never apply signal to the LCD module without power supply.
16.   IC chip (eg. TAB or COG) is sensitive to the light. Strong lighting environment could possibly cause malfunction. Light sealing structure casing is recommend.
17.   LCD module reliability may be reduced by temperature shock.
18.   When storing the LCD module, avoid exposure to the direct sunlight, high humidity, high temperature or low temperature. They may damage or degrade the LCD module
